

*At the Cutting Edge*

CERES TURF CATALOG **2018**

# *At the Cutting Edge*

## **Innovations by Ceres Turf**

*Ceres Turf was started in July of 2007. Since then we have been responsible for several 'firsts' in the industry. Many of these were so profound that they have been adopted throughout the industry with little awareness. Consequently, the work-lives of many have been quietly and profoundly changed for the better.*

- **FIRST IN MATERIALS** – CTI was the first company to use solid rod, high carbon alloy steel for all coring, bayonet and cross style tines. Before CTI changed the standard, coring tines were all made from tubular stock which is a cheaper process but the tines are not as durable. All bayonet and cross tines were made from a process called 'investment casting' (pouring molten steel into a form) which cost less but only lasts half as long. Using solid rods allow one to engineer a tine to have more material (thicker walls) at stress or wear points for longer life.
- **FIRST IN TECHNOLOGY** – CTI was the first and still is the only company to develop a revolutionary hardening process we call **Phoenix**. It is a *thermochemical* process that takes high carbon alloy steel and transforms it into a new compound that is as durable as carbide and does not rust. A tine that is both made from a solid rod and is Phoenix treated is the longest lasting non-carbide tine available. In addition to the **Phoenix** process, CTI's **Phoenix** bedknives are the straightest and most durable bedknives on the market today.
- **FIRST IN PACKAGING** – CTI was the first company to label and prepackage tines packs of 3 and 12. This change has eliminated losing tines in transit due to tines breaking through boxes and has reduced counting errors. CTI can guarantee you will receive the tines you need when you need them.

**We are continually working to develop new and improved products *AT THE CUTTING EDGE* of technology...this is our promise, our passion and our commitment to you and the turf industry.**

# Ignite Your Imagination

**...born in fire  
for strength and  
durability**

## **INTRODUCING PHOENIX TINE TECHNOLOGY**

A thermo-chemical technology that will change the turf industry

Reduced Grow-in Time    No More Chipped or Broken Tips

No More Searching for Lost Tips    No More Side-Wear Above a Tip

For years the industry has looked for a metal  
that would be as hard as carbide without  
the problems. Today we have it...

Phoenix Technology

## PHOENIX TINES

CTI Phoenix technology offers many remarkable benefits to the aerification process. Previously, you had to choose between a long-life, durable carbide tipped coring tine, or a clean efficient cut and core with a standard heat treated tine. Phoenix provides both including significantly reduced 'grow-in' period and rust resistance for longer life. Phoenix tines offer greatly improved cost/longevity benefit ratio. For more info on our Phoenix technology, see *How is Phoenix Better* at [www.ceresturf.com](http://www.ceresturf.com).

## SOLID L-SHAPED TINES

All 'L' tines are made of 4140 alloy steel and heat treated to optimum industry standards.

## SOLID ROUND TINES

Solid round tines are made of 4140 alloy steel and designed to provide the longest life possible for an outstanding value. The individual design of each tine is a result of years of research and customer feedback.

## TALON TINES

*(Cross tines)*

Our Talon tines are designed to maximize surface area and minimize plant trauma to provide the optimum gas and water exchange. There is so little disturbance to the green that it is possible to resume play immediately after an aerification with little or no impact on putting. The 'root severing' action promotes root branching for a stronger, healthier root mass.

## VENT TINES

*(Bayonet or Slicing tines)*

Our Vent tines are a modified Talon design where the hole remains open and continues to provide gas and water exchange. Vent tines offer exceptional plant respiration benefits for up to three weeks. Vent tines promote drainage and prepare surfaces for sodding, hot spots, or as a pre-seeding prep process due to minimal soil disruption. Resume play immediately after an aerification with little or no impact on putting.

## CTI CORING TINES

CTI is the first to use 4140, solid rod alloy steel for its standard coring tines - a far stronger and more durable option than tubular steel. Making tines of solid rod material is more costly but makes it possible to add additional material at wear points for extra strength and longevity. CTI has a new line of top-eject coring tines.

## DEEP CORING TINES

*(Redexim; Toro SR; Wiedenman)*

CTI has improved the Deep Coring tine by using a single piece of solid 4140 alloy steel - unlike other companies who construct tines in a two piece design with a shank and hollow tube (joined by a roll-pin). Solid 4140 steel alloy is a stronger, more durable choice compared to hollow 4130. Our Deep Tines also come in Phoenix options.

# BEDKNIVES

We offer two lines of bedknives, an excellent **Standard** bedknife line and a premium **Phoenix** line for those who want exceptional hardness and durability. Our Standard line is a wonderful product with an unsurpassed price/performance profile. In short, value. We have optimized our production process so we can offer our Standard line, a top quality bedknife, at a bargain price.

But for those who demand the ultimate in durability, hardness, and longevity we have our Phoenix line. Phoenix bedknives have very exacting tolerances. Our Phoenix bedknives are made of a new, super-hardened alloy and are a step-

change product with no equal in the turf industry. Indeed, we invite comparisons! Phoenix bedknives give a cut and longevity profile that is the best available anywhere! They are made of single piece construction so there is no wire or insert to peel off. Phoenix bedknives are especially designed to reduce drag and prevent scraping or scalping. Phoenix bedknives will withstand more sharpening cycles than any other currently available knife. This technology is not easy or inexpensive so Phoenix bedknives command a premium price. Considering the very long life and exceptional cutting qualities our Phoenix line is an excellent value.

# ROTARY BLADES

Ceres Turf is honored to offer the Oregon™ line of rotary mower blades. Oregon rotary blades are the leader in high quality rotary blades with a reputation for durability and re-

liability. There is a quality Oregon blade available for almost any rotary mower.

## WARRANTY

If a warranty issue is suspected, the first step is to save all the parts and packaging and then notify either the Ceres Turf Dealer or Distributor who sold you the parts or contact us directly at 1-866-929-9916 or 1-910-256-8974.

1. DO NOT try to return anything without an RA number! We will likely ask you to return the defective parts (and any unused parts) for testing. You must first receive a **RETURN AUTHORIZATION NUMBER** which must be displayed clearly on the outside of the box. If the part(s) are judged defective a full refund will be issued.
2. Save all packaging material.
3. Protect the suspect parts from any additional damage after use.
4. DO NOT RETURN ANY PARTS TO CTI WITHOUT an RA NUMBER!

Please refer to our full Warranty Policy at: <http://www.ceresturf.com/product-warranty>
